## PROJECTS

### Automatic face recognition system | Stereo matching algorithm

1. A simple and effective method for face recognition with pose and expression variations, as well as illumination changes using Stereo Matching Algorithm
2. The method is characterized by its simplicity and significantly higher accuracy in comparison to previous techniques.
3. Future possibilities include the incorporation of a multimodal biometric system, such as combining face recognition with other modalities like fingerprints, palm prints, iris scans, speech etc.

### Food delivery time prediction | Data Science, Machine Learning, IBM SPSS Modeler

1. The project focuses on analyzing food delivery delays, collecting relevant datasets to investigate the issue.
2. IBM SPSS Modeler is used to visualize the data and create predictive models for food delivery delay.
3. These models are deployed to measure and continuously improve the accuracy of delivery delay predictions over time.
